

MAXURETHANE® FOAM

TWO-COMPONENT POLYURETHANE RESIN SYSTEM FOR SOIL INJECTION AND CONSOLIDATION

DESCRIPTION

MAXURETHANE® FOAM is a two component, CFC free product. A component is a polyisocyanate MDI type and B component is a pre-formulated polyol.

When injected with the proper equipment at 1:1 mixing ratio, their reaction will provide a foam as a result which fills cavities and hollows in the ground.

USES

- Filling of any spaces or hollows behind below grade structures (tunnels, metros, underground car parks)
- Injection of anchoring
- Injection of joints in channels, water main, etc

APPLICATION

The injection will be performed by means of a two component type pump with a volumetric ratio of 1:1 installing a static mixer in its end. The injection will be performed directly on the ground or the joint to be sealed.

ADVANTAGES

- Low viscosity ensures good and deep penetration.
- High fluidity.
- CFC free.

PACKAGING

25 litre and 5 litre drums.

TECHNICAL DATA

Physical characteristics

	Component A	Component B
Mixing ratio	1	1
KOH/mg number	-	333
NCO% contents	31	-
Colour	Brown	Yellow
Specific weight Gr./ml. (20°C) DIN 51757	1,23	1,07
Viscosity 20/25°C cst	210	1700
Storage temperature °C	20/35	10/20
Shelf life (months)	6	3

Foam

Induction time (sec)	23-35
End of reaction (sec)	60-85
Tack-free time (sec)	70-90
Density in free foaming kg/m³ condition (UNE 53144)	100-110
Compressive strength (kg/cm³) DIN 53421	Approx. 15
Expansion rate (times)	7

GUARANTEE

The information contained in this leaflet is based on our experience and technical knowledge, obtained through laboratory testing and from bibliographic material. **DRIZORO®, S.A.** reserves the right to introduce changes without prior notice. Any use of this data beyond the purposes expressly specified in the leaflet will not be the Company's responsibility unless authorised by us. We shall not accept responsibility exceeding the value of the purchased product. The data shown on consumptions, measurement and yields are for guidance only and based on our experience. These data are subject to variation due to the specific atmospheric and jobsite conditions so reasonable variations from the data may be experienced. In order to know the real data, a test on the jobsite must be done, and it will be carried out under the client responsibility. We shall not accept responsibility exceeding the value of the purchased product. For any other doubt, consult our Technical Department. This version of bulletin replaces the previous one.
